

Window blind Safety - Make it safe!

Internal window blind cords and chains are a risk to babies and small children who could injure or even strangle themselves on looped operation cords and chains.

Making your existing blinds safer

If you have a window blind which has an operating cord or chain that could form a loop you must keep it out of the reach of babies and young children. There are a range of safety devices available for every type of blind.

Chain-break connector
These will break apart when undue pressure is applied on the operating chain but, after inspection, can be reconnected again. Chain sizes vary so you **must** use the chain-break connector which is designed to be used with your specific chain.

Cord/Chain tidys & tensioners
These devices should be securely fixed to an adjacent surface and at the maximum distance from the top of the blind so the cords and/or chains are held permanently taut by the device.

Cleat
This should be securely fixed to an adjacent surface out of the reach of children and at least 1.5 metres from the floor. The cord must be secured as shown after each and every operation of the blind.

Young children can be strangled by loops in pull cords, chains, tapes and inner cords that operate the product. To avoid strangulation and entanglement, keep cords out of the reach of young children. Cords may become wrapped around a child's neck.

Move beds, cots, highchairs and playpens away from window covering cords and chains.

Make sure all cords and chains are always secured out of reach of babies and young children. Do not tie cords or chains together. Make sure cords or chains do not twist and create a loop.

Move furniture away from window covering cords and chains as children love to climb.
